

# **GT debugging**

**Session du gdr-gpl  
15 juin 2021**

**Steven Costiou, Benoît Combemale**

# Histoires de bugs - épisode 2

## The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- A user called the email admin complaining that he couldn't send mails further than 500 miles...

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

- A user called the email admin complaining that he couldn't send mails further than 500 miles...

**Haha, does not work like that...**

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

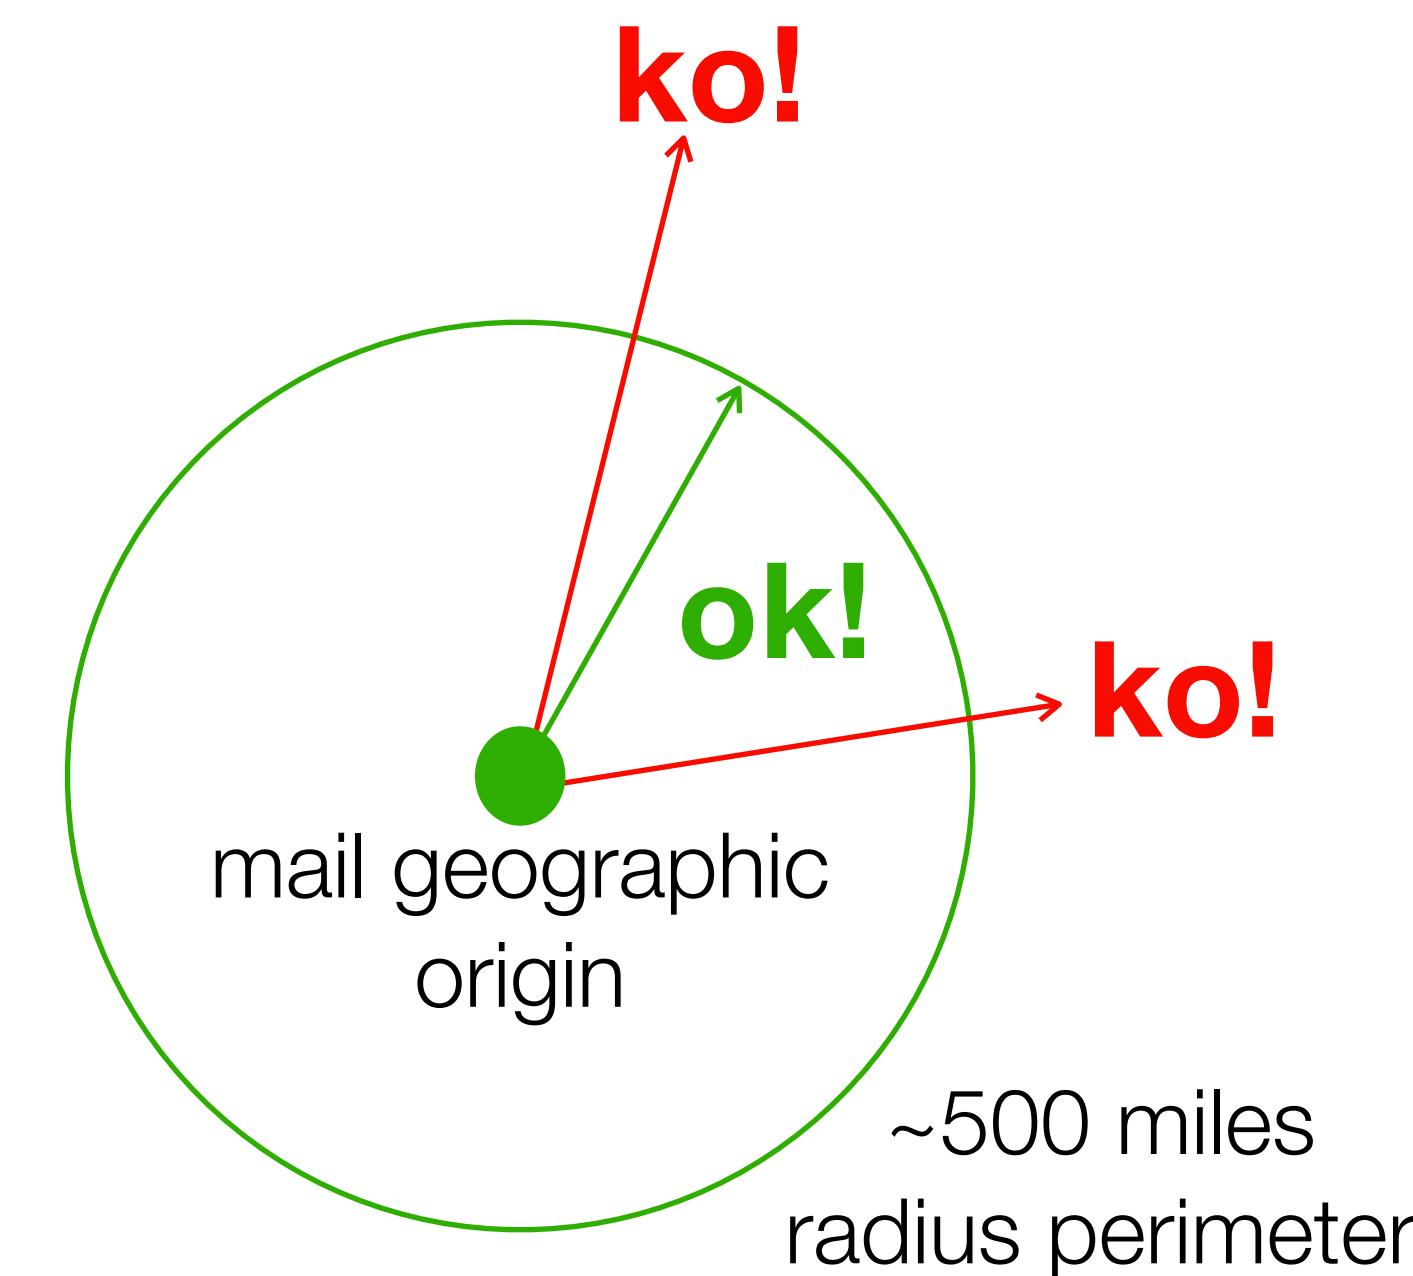

- A user called the email admin complaining that he couldn't send mails further than 500 miles...

**Haha, does not work like that...  
wait...**

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

- The developer, Trey Harris, tried. It was true!
- He sent mails to several recipients located at different geographic positions to compute the distance limit
- It was approximately 500 miles...

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- **So what happened?**
- According to the users: nothing

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- **So what happened?**
- According to the users: nothing
- Just, a consultant came a few days ago to update the server's operating system...

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- **The server?**

- The email system was running on SunOS with the SendMail software
- Sun shipped SendMail 5 by default, but the email admin updated to the most recent version, SendMail 8, and wrote configuration file for SendMail 8

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- **So what really happened?**
  - The upgrade had the side effect to downgrade SendMail 8 to SendMail 5
  - This was not visible, because SendMail 5 was working but ignoring SendMail 8 configuration files and using the default value **0** instead

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- **So what really happened?**
  - The upgrade had the side effect to downgrade SendMail 8 to SendMail 5
  - This was not visible, because SendMail 5 was working but ignoring SendMail 8 configuration files and using the default value **0** instead
  - **In particular, for the timeout to connect to the remote SMTP server...**

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

- **What happened?**
- Experimental tests showed that, due to a particularity of the campus network, a 0 timeout would abort a connect call in about 3 milliseconds

# The 500-mile email

<https://www.ibiblio.org/harris/500milemail.html>

---

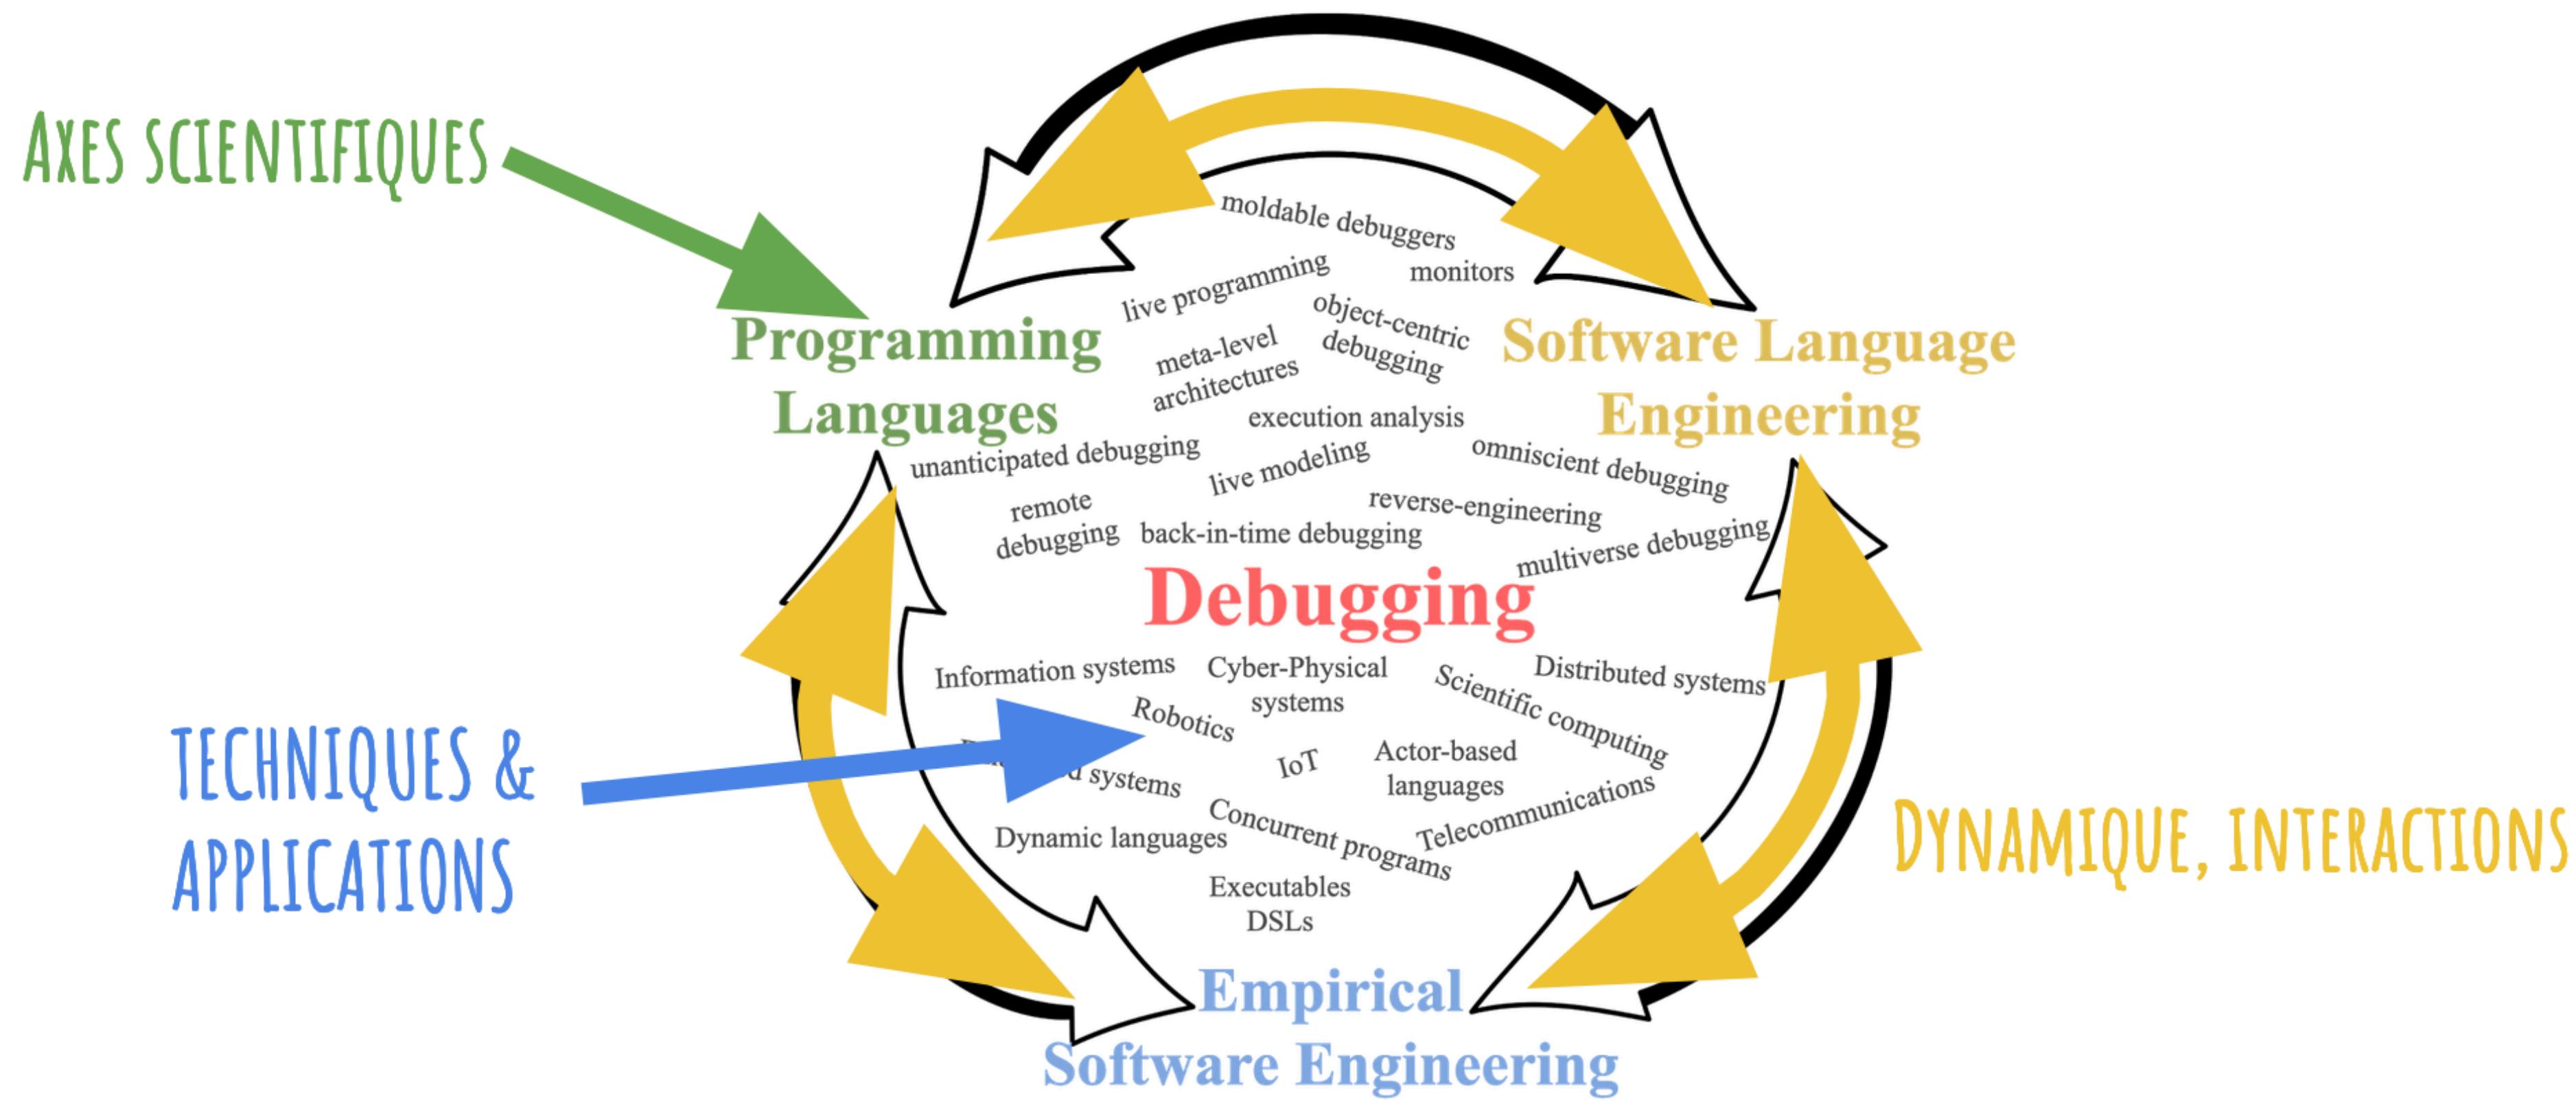

- **What happened?**
  - Experimental tests showed that, due to a particularity of the campus network, a 0 timeout would abort a connect call in about 3 milliseconds
  - What is the distance that light (or electric current) can travel in 3 milliseconds on wired network?
  - **About 500 miles...**

# GT Debugging

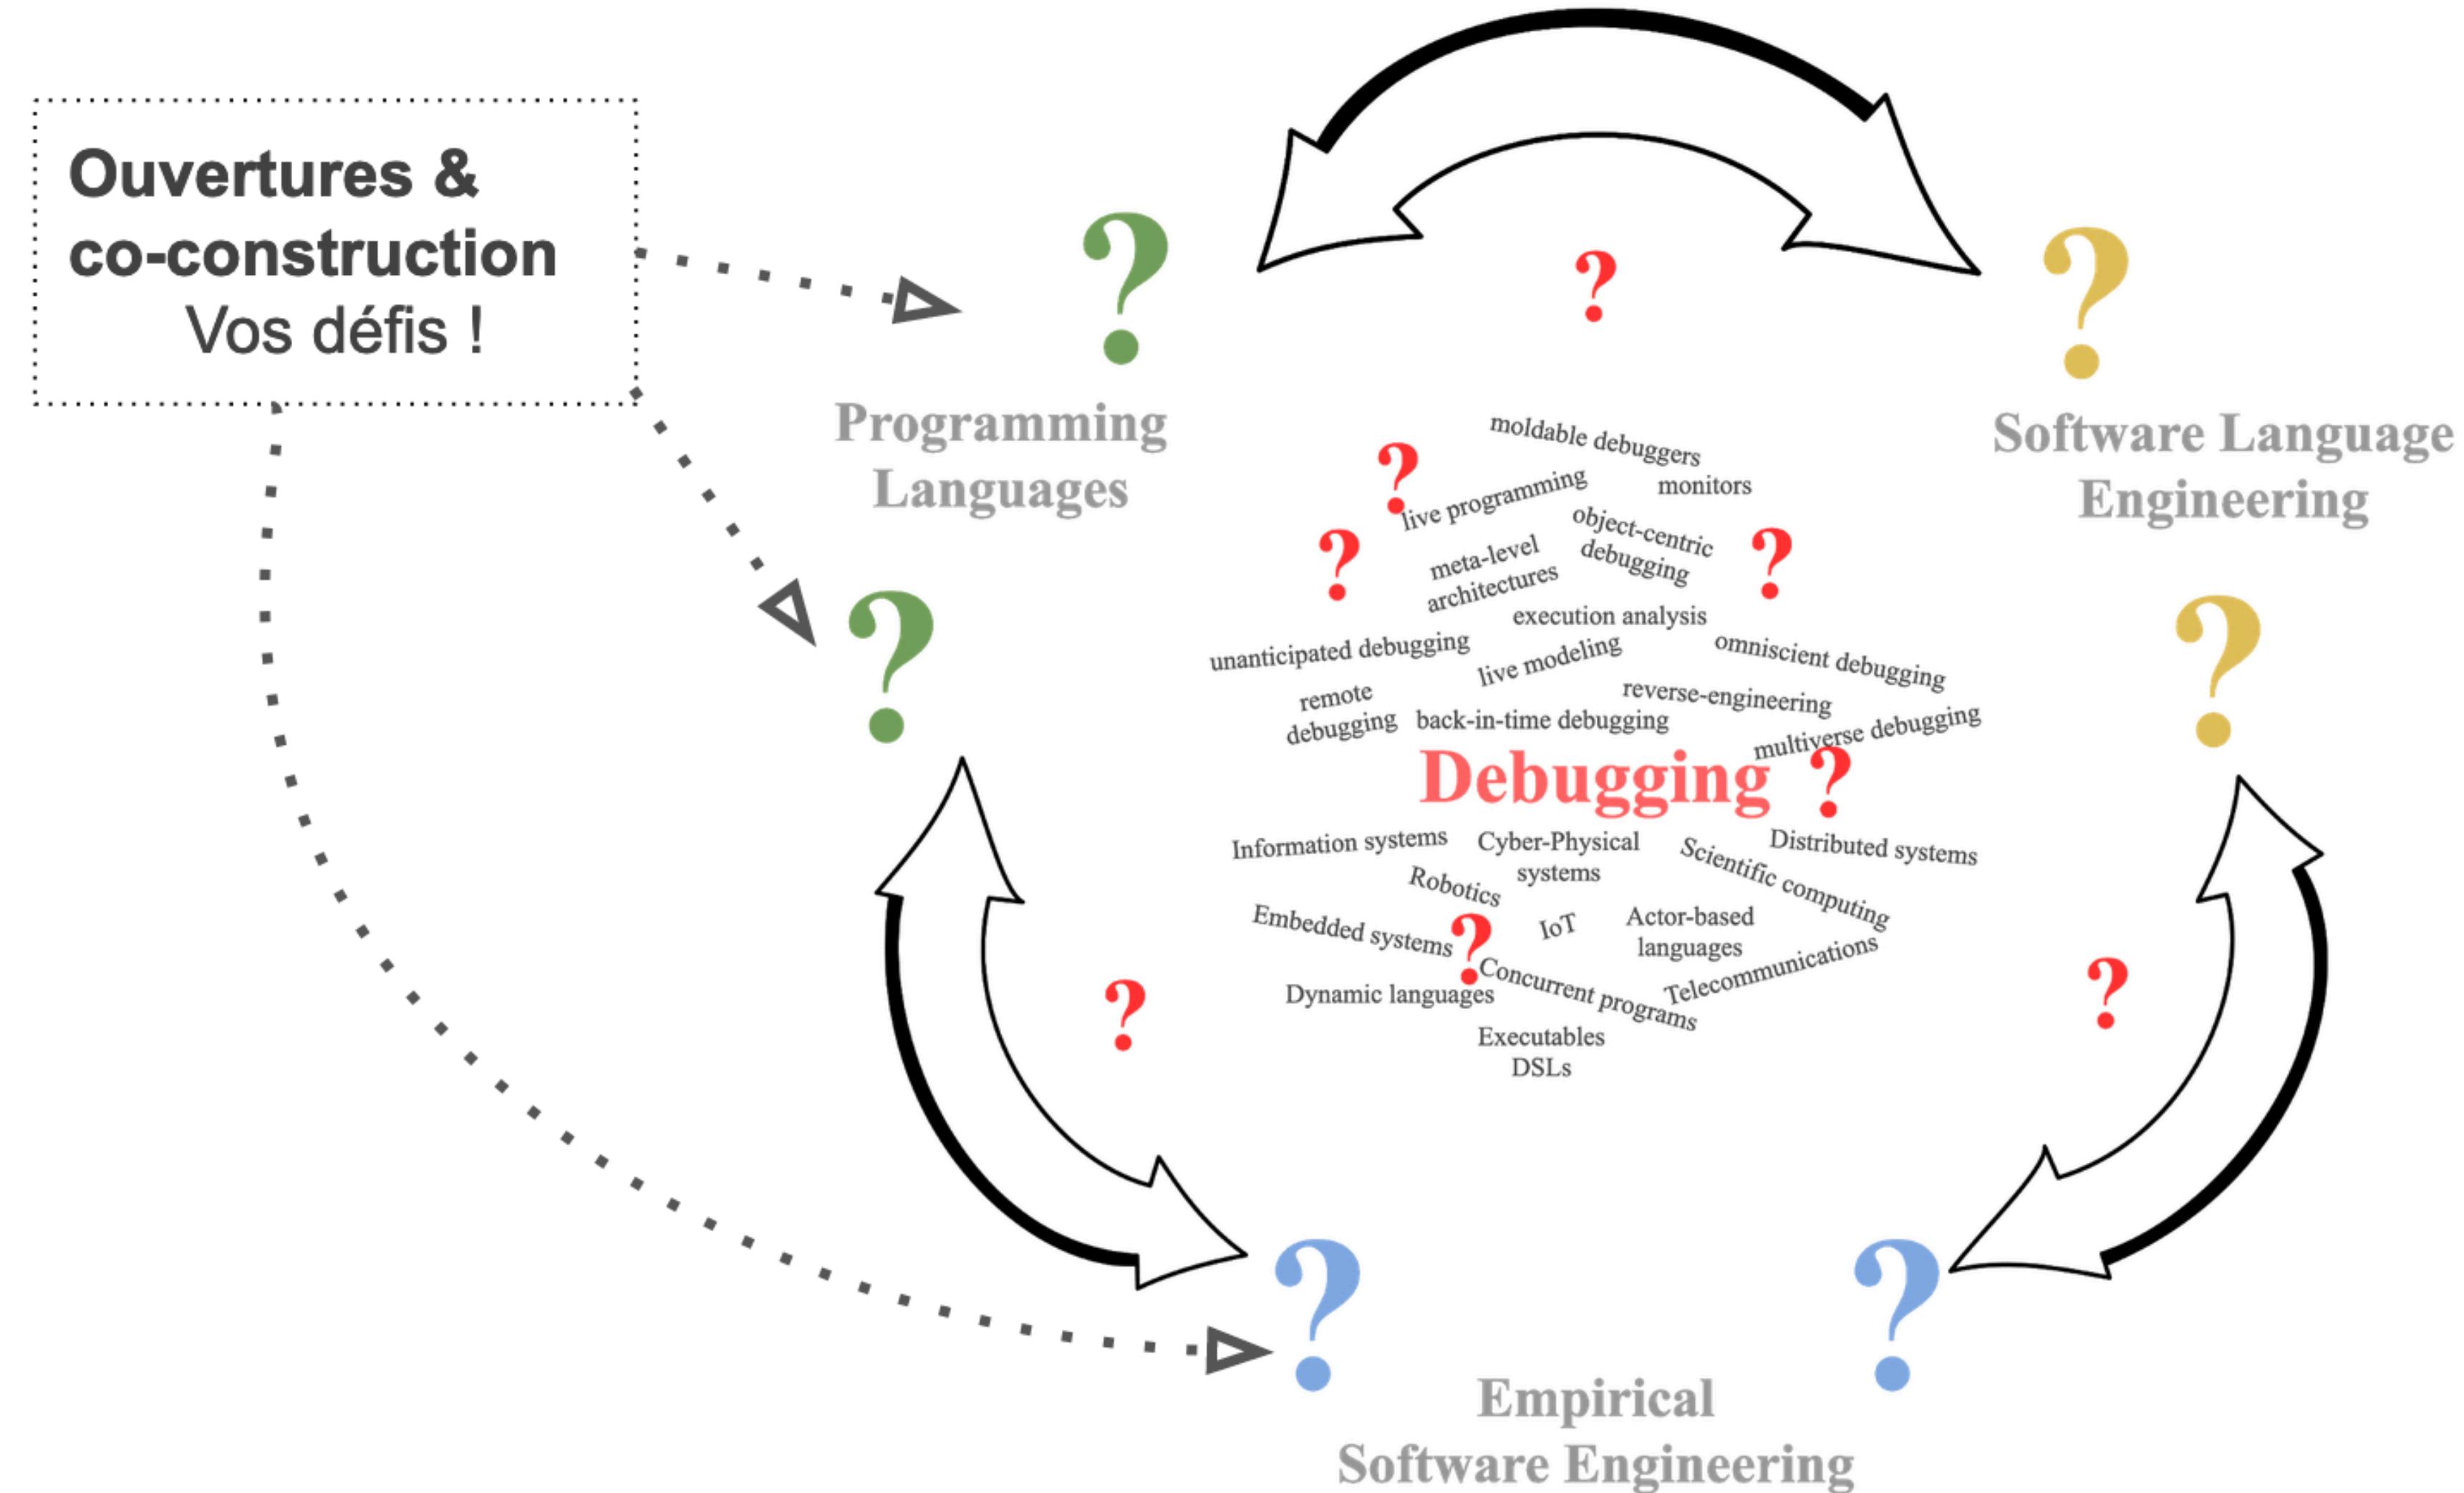

---

- Rappel : qu'est-ce que le GT Debugging
- “Bilan” et organisation
- Présentations et table ronde

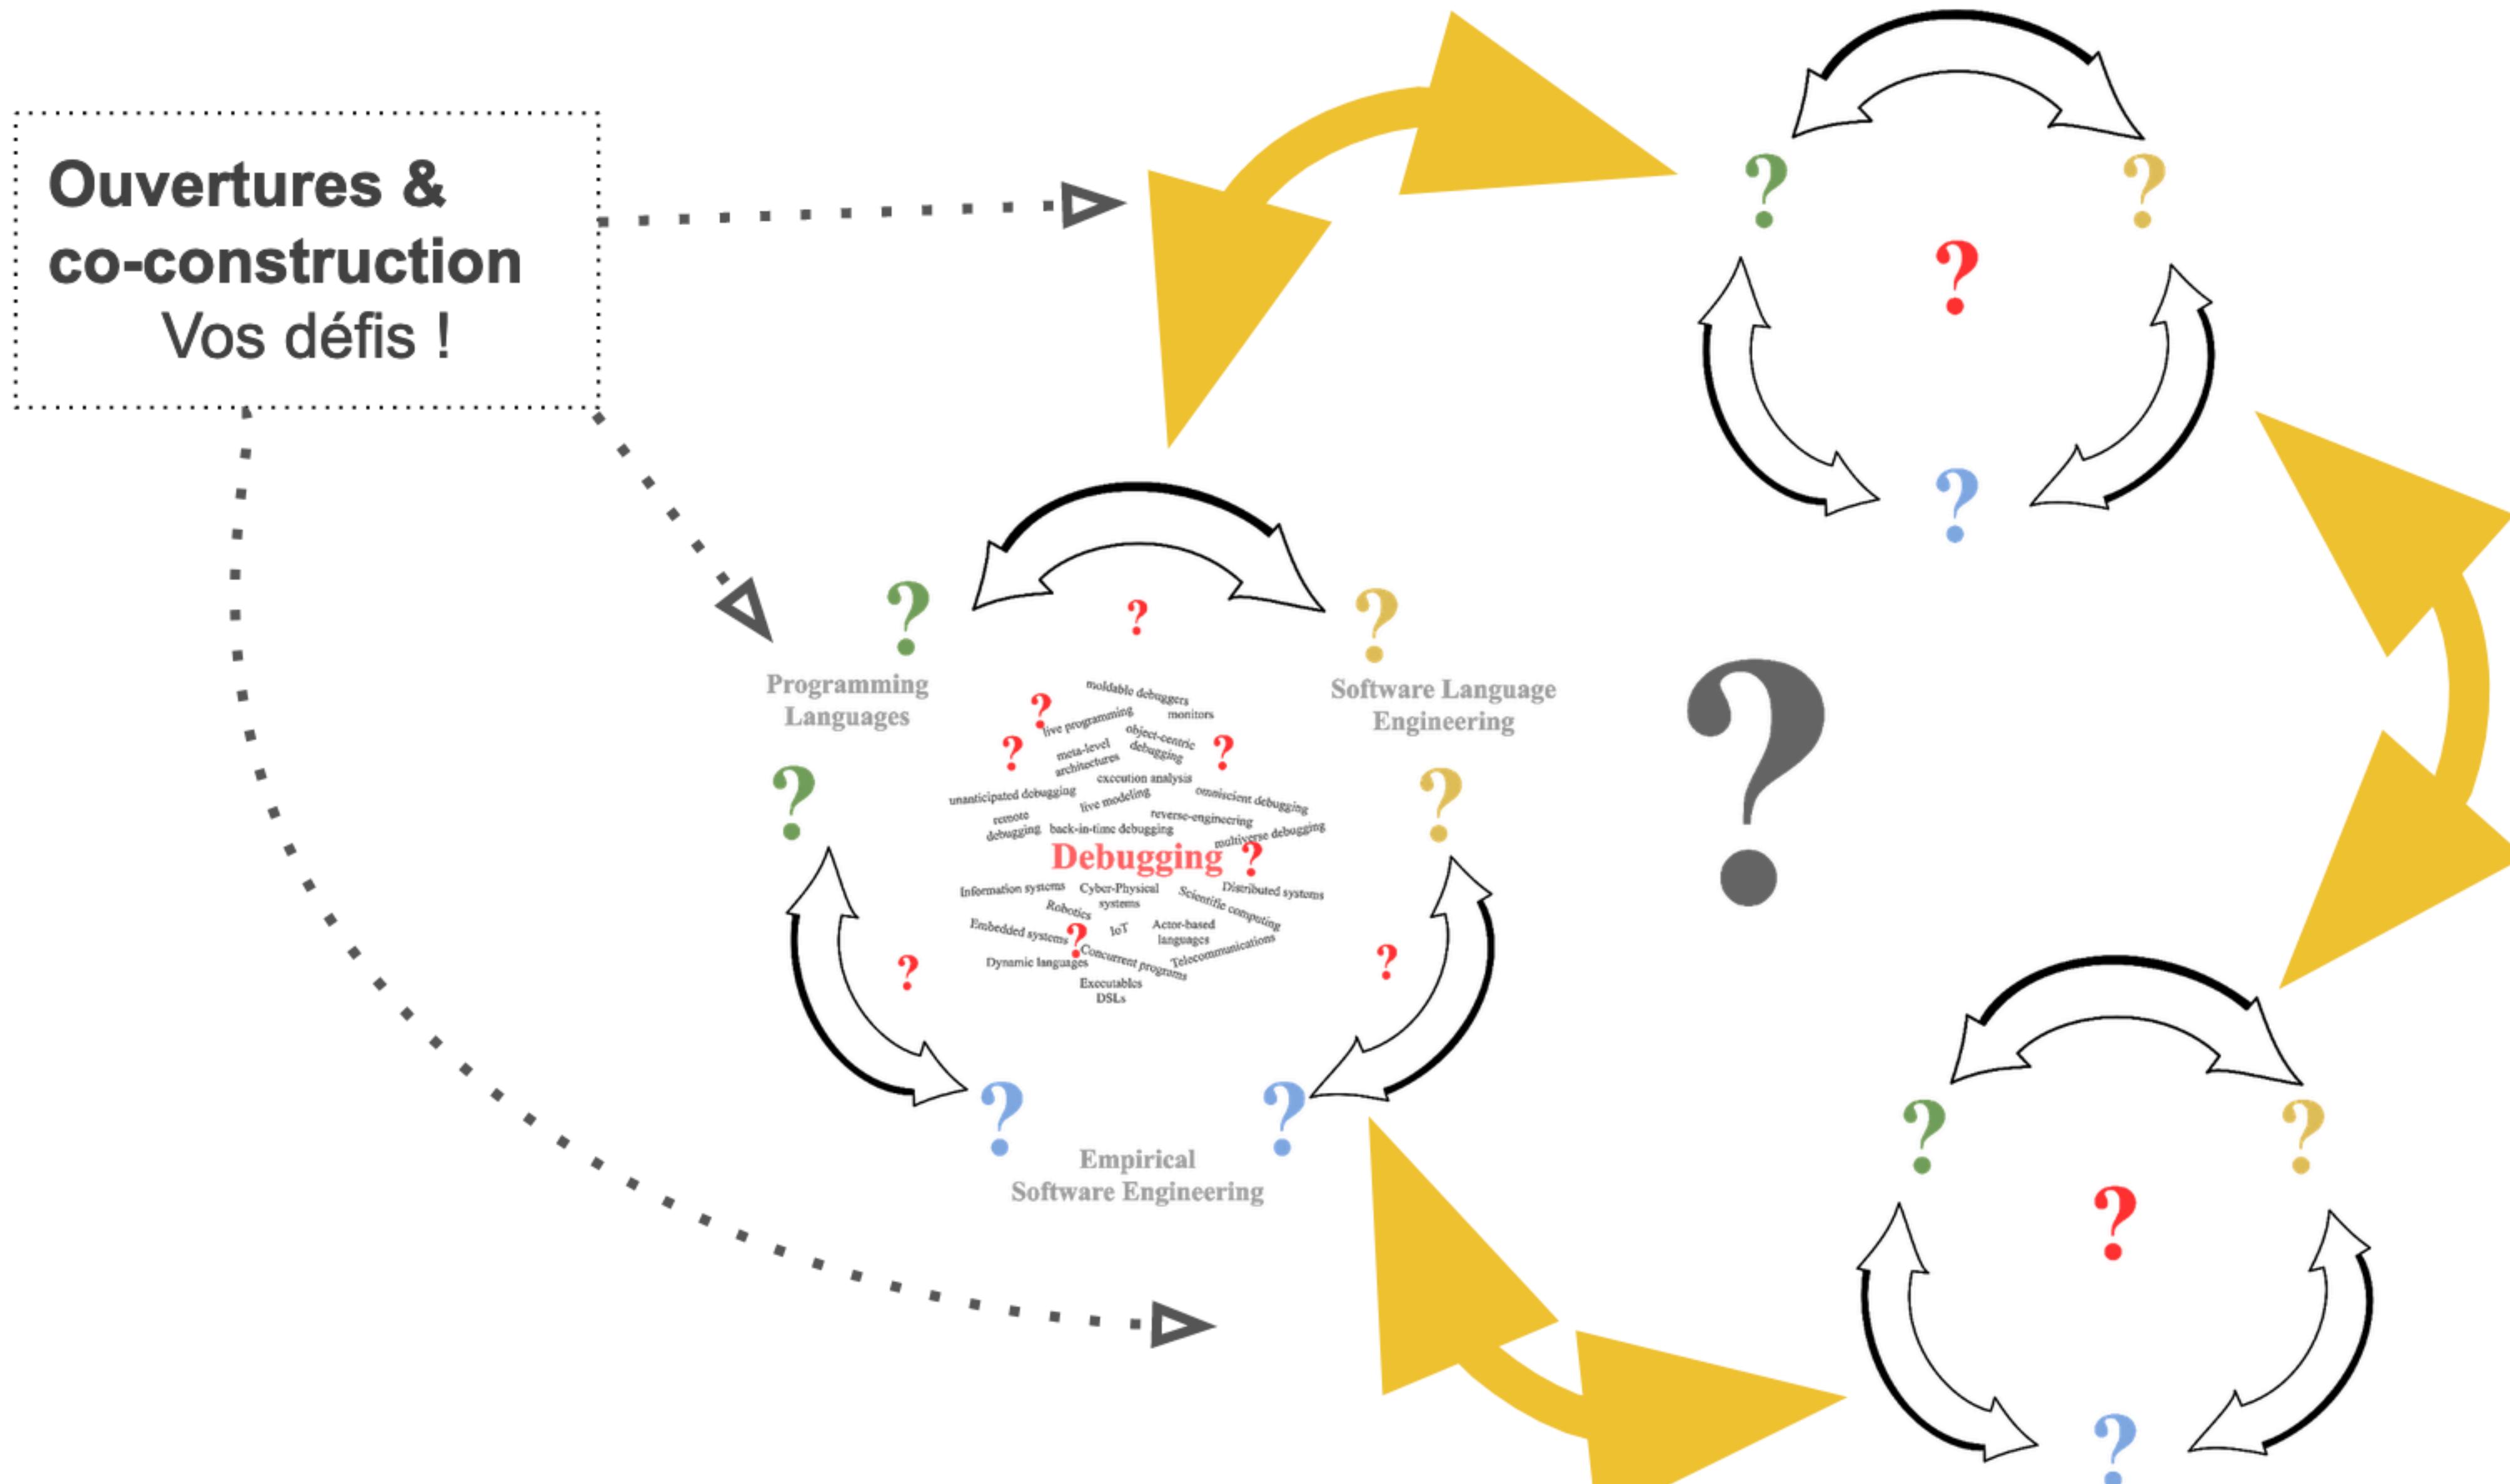

# Rappel : qu'est-ce que le GT Debugging

# Rappel : qu'est-ce que le GT Debugging

# Rappel : qu'est-ce que le GT Debugging

# Bilan et organisation

---

- **Réunions mensuelles**
  - 45 minutes : présentation scientifique (30 minutes) et discussion (15 minutes)
- **Réunion annuelle**
  - En présentiel, une journée : présentations, workshops, tutoriels...
- **Session “Debugging” à la réunion annuelle du GDR**
  - Bilan de l’année du GT
  - Présentation des meilleurs articles publiés dans l’année par les membres du GT

# Bilan et organisation

---

- **Bilan des réunions mensuelles**
  - Kickoff, 21 mai 2021
  - 18 participants (RmOD, DiverSE, Thales, SOFT, LaBRI, LAAS, LS2N, Verimag, LIG, Shaker)
  - Challenges et questions posées
    - *Comment debugger une application temps-réels, avec des contraintes temporelles fortes et de la concurrence (LAAS) ?*
    - *Quelles sont les abstractions à proposer à un utilisateur de langages non impératifs (e.g. dataflow) pour lui permettre une stratégie de debug pertinente liée à son expertise métier (DiverSE) ?*
    - *J'aimerai bien avoir une discussion sur la notion d'état et du versionning d'état (en présence d'un graphe) dans un omniscient debugger (RMOD?) (+1 DiverSE)*
- **Prochaine réunion début juillet 2021 (date à fixer)**
  - Présentation de Pierre Laborde, Thales :  
*“Prototypage IHM pour la défense : déboguage et correctifs distribués à chaud et sans interruption de système collaboratifs en cours d'exécution”*

# Présentations et table ronde

---

## Présentations (~1h30)

- **Introduction**, Steven Costiou, Benoît Combemale
- **Monilogging for Executable DSLs**,  
Dorian Leroy
- [video] **Sub-method, portable behavioural reflection with Reflectivity: looking back on 10 years of use**,  
Steven Costiou, Vincent Aranega, Marcus Denker  
<https://programming-journal.org/2020/4/5/>  
<https://www.youtube.com/watch?v=bJO4tAilwng>

## Table ronde (~30min)
